

## Cybersecurity

Fusion Technology understands the importance of Cybersecurity measures and keeps up with new and emerging threat-hunting tools and technologies. We uncover enterprise security deficits and determine best-value solutions. It is our first step in developing, implementing, and coordinating services to **protect our customers' systems from threats.**

Fusion Technology **ensures Cybersecurity** throughout system builds as part of our SAFe Agile development process. Fusion Technology **performs vulnerability/risk analyses for computer systems and applications during all phases of the system** development life cycle. We ensure that all information systems are functional and secure. Fusion Technology performs system security tuning, provides security monitoring, and performs general and privileged user account management. These are among other services we offer to integrate cybersecurity throughout every contract.

By analyzing user, policy, regulatory, and resource demands, Fusion Technology identifies best-value resources and services to **protect all aspects of our customers' systems.**
