

About Us

Fusion Technology, a certified HUBZone Small Business, was founded in 2007 to provide comprehensive information technology services and solutions to mission-critical US Government programs, and the Intel Community. With offices in three locations - Bridgeport, WV, Easton, MD, and Huntsville, AL - Fusion Technology is process-oriented and employee centered where 94% of our employees have TS clearances, 95%+ have college degrees, and our business keeps growing.

Cloud Development

Fusion Technology provides the expertise necessary to improve and enhance an enterprise's migration to the Cloud from on-premise systems or applications into a secure Elastic Cloud or server-less solution. Fusion Technology has provided private- and public-proven cloud solutions for more than five years in the federal technology market.

- Cloud Architecture
- DevOps
- Cloud Migrations
- Trade Studies
- Cloud Infrastructure
- Analysis of Alternatives
- Cloud Security
- Server-less Applications
- AWS & Azure Certified
- Proof of Concept Development

Cybersecurity

Fusion Technology currently partners with the FBI and DHS to determine, develop, implement, coordinate, and evaluate information assurance and security standards and programs to comply with FISMA and NIST policies. Fusion Technology helps identify and resolve security violations as well as analyze and develop security features and requirements for systems and system architectures.

Core Cyber Security Services:

- Architectural guidance & program-wide security policies
- Pre-development compliance efforts
- Threat Hunt and Cyber protection of CSPs
- Monitor infrastructure for known & new vulnerabilities
- Compliance audits / ATO
- Zero Trust Architecture
- Single Sign-On
- Vulnerability Assessment

Areas Where We Can Help Develop / Maintain Systems:

- Incident Response Efforts
- SIEM content and infrastructure engineering/management
- Management of security applications/devices
- Integration of COTS/GOTS software and hardware into custom environments
- Develop and provide clear and relative reports of applicable metrics and data-points
- Provide user training for security applications as they relate to the current environment

Agile Development

Our Agile practitioners help software development team members produce value using modern, highly responsive practices such as User Centered Design, Behavior-Driven Development, and lightweight prototypes. In addition, Fusion Technology employees are highly adaptable and can operate within organizations at any level of Agile maturity, using Scaled Agile Framework (SAFe), DevOps, Kanban, or Scrum Software Development Lifecycle (SDLC) frameworks.

Supporting All Stages of the SDLC:

- User Story/Requirements Gathering Facilitating Minimum Viable Product Outlay
- Incremental Software and Process Improvement
- Developing Cross-Functional Teams
- Ongoing Process Maturation
- Interfacing with Waterfall
- Agile Transformations
- Team Coaching
- Providing SAFe Training
- Increasing Employee and Stakeholder Engagement
- Performance and Value Optimization

Data Analytics

Fusion Technology specializes in delivering advanced data solutions through the integration of big data processing, entity analytics, and AI/ML. We work with complex, high-volume datasets to extract meaningful insights and support critical decision-making. Our team develops and deploys scalable, cloud-based pipelines using AWS services and custom-built tools to cleanse, transform, and load data from various sources. Fusion's proprietary Entity Analytics software plays a key role in resolving fragmented data into unified, searchable entities, while our AI/ML capabilities further enhance our ability to identify patterns, extract relevant information, and generate predictions.

Big Data Processing:

- Collect, process, and analyze high-volume, high-velocity data using AWS DynamoDB, S3, and custom Python scripts.
- Execute large-scale ETL operations with data cleansing and transformation via AWS Lambda.
- Load structured data into target databases or data warehouses.
- Perform entity resolution using fragmented data inputs.

AI/ML Integration:

- Apply machine learning models to analyze data, identify trends, and make predictions.
- Use AWS Comprehend for entity extraction from narrative text.
- Implement tailored AI solutions to support mission-specific objectives
